	 <b>Donor</b>	Yes		
	 <b>Severity</b>	Carrier at risk		
	 <b>Consult</b>	Scheduled		

The diagram illustrates the process of deleting a record in a database application. It consists of four sequential steps connected by downward arrows:

- Initial State:** A table with columns 'ID', 'Name', 'Status', and 'Last update'. The first row contains '1', 'Roberta Jone', 'Ordered', and 'Last week'. A cursor is positioned over the 'Roberta Jone' cell.
- Action:** The user clicks the 'DEL' button located to the right of the selected record.
- Confirmation:** A modal dialog box appears with the title 'Do you want to delete this record?'. It contains the text 'Do you want to delete this record?' and two buttons: 'Yes' and 'No'.
- Result:** After confirming the deletion, the record is removed from the table. The table now shows a search bar with the text 'search records' and an empty list of records.
